ST1408 - I12 Complete Vehicle	40
ST1821 - High-voltage Diagnosis Specialist	41
ST1848 - ASE Test Prep	42
ST1903 - 2019 Model Year Update	43
Required Web Based Training	44
OL17-5021 - Intro to BMW Identification Systems and Driving Technology	44
VO366 - Service Process: Workshop Administration and Repair Protocol	44
VO368 - Service Process: Reduction and Management of Repeat Repairs	45
VO369 - Service Process Overview	45
WB618 - Fundamentals of Air Conditioning	45

Subject	Page
Web Based Training	46
OL1831a - G05 Body	46
OL1831b - G05 Drivetrain, Chassis & Suspension	46
OL1831c - G05 General Vehicle Electronics	46
OL1831d - G05 Driver Assistance Systems	47
OL1831e - G05 Displays & Controls	47
OL1833a - G15 Body	48
OL1833b - G15 Drivetrain, Chassis & Suspension	48
OL1833c - G15 General Vehicle Electronics	48
OL1833d - G15 Driver Assistance Systems	49
OL1833f - G15 Infotainment	49
OL1853 - B58TU Engine	50
OL1854 - N63TU3 Engine	50
OL1855 - Displays & Controls 2018	50
OL1856 - General Vehicle Electrics 2018	51
OL1857 - Infotainment 2018	51
OL1858 - Driver Assistance Systems 2018	51
OL1408a - I12 Introduction	52
OL1408b - I12 General Vehicle Electronics	52
OL1408c - I12 High-voltage Components	52
OL1408d - I12 High-voltage Battery Unit	53
OL1408e - I12 Heating and Air Conditioning	53
OL1408f - I12 Drive	53
OL1408g - I12 Chassis and Suspension	54
OL1408h - I12 Body Repair Level 1	54
OL1501a - G12 Body Introduction	54
OL1501b - G12 Chassis and Suspension	55
OL1501c - G12 Powertrain	55
OL1501d - G12 Voltage Supply and BUS System	55
OL1501e - G12 General Vehicle Electronics	56
OL1501f - G12 Driver Assistance Systems	56
OL1501g - G12 Displays and Controls	56
OL1501h - G12 Information and Communication	57
OL1501i - G12 Climate Control	57
OL1602 - F87 Complete Vehicle	57
OL1604a - G30 Complete Vehicle (Body)	58
OL1604b - G30 Complete Vehicle (Powertrain/Chassis)	58
OL1604c - G30 Complete Vehicle (General Vehicle Electronics)	58
OL1604d - G30 Complete Vehicle (Driver Assistance)	59
OL1604e - G30 Complete Vehicle (Infotainment)	59
OL1604f - G30 Complete Vehicle (Displays & Controls)	59
OL1607a - G12 PHEV High-voltage Components	60
OL1607b - G12 PHEV High-voltage Battery Unit	60
OL1700a - G30 PHEV High-voltage Components	60

Subject	Page
OL1700b - G30 PHEV High-voltage Battery Unit	61
OL1403a - I01 Product Introduction	61
OL1403b - I01 Body Level 1	61
OL1403c - I01 Chassis & Suspension	62
OL1403d - I01 General Vehicle Electronics	62
OL1403e - I01 High-voltage Components	62
OL1403f - I01 High-voltage Battery Unit	63
OL1403g - I01 Heating and Air Conditioning Systems	63
OL1403h - I01 Information and Communication	63
OL1403i - I01 W20 Engine	64
OL1507a - F15 PHEV Complete Vehicle	64
OL1507b - F15 PHEV Battery Unit	64
OL1600a - F30 PHEV High-voltage Components	65
OL1600b - F30 PHEV High-voltage Battery Unit	65
OL1700a - G30 PHEV High-voltage Components	65
OL1700b - G30 PHEV High-voltage Battery Unit	66
VO153 - BMW History and Heritage	66
VO810 - BMW Advanced Diesel Technology	66
VO900 - Understanding Energy Diagnosis	67
VO720 - Identifying E93 Convertible Water Leaks	67
WB057 - Electronic Transmission Fundamentals	67
WB401 - Basic Bus Systems Online Course	68
WB402 - Advanced Bus Systems Online Course	68
WB603 - Introduction to Diesel Technology	68
WB920a - Principles of Hybrid Technology	69

Training Path

Starting in 2018 and continuing in 2019 and beyond, a new training path has been developed with the following objectives:

- Divide the current curriculum into more understandable “Bite Sized” portions.
- Change the method Technical Training is presented to the technicians.
- Change the level designations from numbers to names.
- Use Level based Tests and Assessments to ensure a technicians correct skill level is represented in the appropriate training level.
- Partner with Automotive Service Excellence (ASE) to provide analytics and data to ensure validity of the Associate Level and Member Level Technician Tests.
- Align BMW Technical Training with ASE in conjunction with other OEM’s with an industry standard of Automotive Certifications for Master Level Technicians.

Levels Explained

Several metrics were used in the creation of curriculum levels. The four levels were created to ensure a proper mix of competencies at the repair center while still maintaining a high level of overall training.

Maintenance Technician

This level will consist of two courses. Master Electrical Diagnosis and Master Drivetrain Diagnosis. These courses will train techs in advanced concepts and process concerning diagnosing BMW vehicles. Courses will concentrate on current advancement in diagnosis and technology and will target technicians with the skill set to “Master” this training.

Associate Level

This level will concentrate on Basic Automotive Technology and will consist of four courses. Workshop Technology I and II, Electrical Technology I and Chassis Technology courses. To obtain Associate Level status the technician must enroll and successfully pass the Associate Level Test (BMW 1 ASE).

This test will be administered by Automotive Service Excellence (ASE) and taken at a Prometric Test Center*. Based on the technician’s skill level, a dealership may decide to challenge the Associate Level at any time by enrolling their technician in the Associate Level Test (BMW 1 ASE) regardless of completing the courses in the Associate Level.

It is the dealer’s discretion to send the technician to additional Associate Level classes even with successful completion of the Associate Test (BMW 1 ASE).

***Prometric Test Centers:** All BMW and or ASE testing at a Prometric Test Center MUST be scheduled thru the ASE website.

Member Level

This level will concentrate on Basic BMW Automotive technology. Similar to the Associate Level above the Member Level will have four courses; Electrical Technology II, Chassis Technology II, Drivetrain Technology and Warranty for Technicians. In this level the technician will begin training in Basic BMW specific technology. As with the Associate Level the technician must enroll and successfully pass the Member Level test (BMW 2 ASE).

This test will be administered by Automotive Service Excellence (ASE) and taken at a Prometric Test Center, upon successful completion of this test they can enroll in the Member Level Hands-on Assessment (HoA). Once all of the assessments have been passed the technician can now start enrolling in Certified Level courses.

Challenge Member Level

This level can be challenged at any time when all prerequisites below have been met. Please consult Service Manager for details.

Certified Level

This level of courses will introduce diagnosis into the Training Path. The courses in this level will consist of three courses. Electrical Technology III, Body Systems and Drivetrain Technology II. This level will not require a written test but will still require completion of all courses in the certified level before enrolling into the Assessment (HoA). Once the technician successfully completes this assessment they can start taking Master Level courses.

Master Level

This level will consist of two courses. Master Electrical Diagnosis and Master Drivetrain Diagnosis. These courses will train technicians in advanced concepts and processes concerning diagnosis of BMW vehicles. Courses will concentrate on current advancement in diagnosis and technology and will target technicians with the skill set to “Master” this training. Master Technicians as of 12/31/17 will be grandfathered in.

Master Assessments

A Hands-on Assessment (HoA) at a BMW Training Center will be required every three years in conjunction with maintaining ASE Master Status.

Listed below are the ASE certification required for Master Level status:

- A1 - Engine repair
- A2 - Automatic Transmission/Transaxle
- A3 - Manual Drive Tran & Axles
- A4 - Suspension & Steering
- A5 - Brake Systems
- A6 - Electrical/Electronics Systems
- A7 - Heating & Air Conditioning
- A8 - Engine Performance

Specialty Level

Specialty courses are also available and require the following job codes to attend these courses. Shop Forman (ST101) must attend all specialty courses. Technician (ST202) attendance will be based on the number of technicians at the dealership). Specialist courses concentrate on the diagnosis and repair on vehicles that may not be routinely performed at the repair center. Examples of these courses are Retractable Hard Top, Diesel Technology and Alternative Drive vehicles are examples of trainings found in the specialty category.

Elective Level

Elective courses are also available and require the following job codes to attend these courses. Shop Forman (ST101) and Technician (ST202). Elective courses are exactly like the 2019 course description catalog states. They are courses that are based on new models and do not require all BMW service technicians to attend.

Associate Level Courses

ST1801 - Workshop Technology I

Description:

This course is designed to instruct participants on working safely in a shop environment, introduce BMW information systems and help participants create effective work habits that will serve them throughout their careers as automotive technicians. The intended participants for this course are entry-level technicians.

Prerequisites: OL17-5021 Intro to BMW Identification Systems and Driving Technology

VO366 - Service Process: Workshop Administration and Repair protocol

VO368 - Service Process: Reduction and Management of Repeat Repairs

VO369 - Service Process Overview

Target Audience: Entry Level Technicians

Course Length: 4-days

Learning Objectives:

After the completion of this course the participant will be able to:

- Understand the importance of protecting the customer's vehicle.
- Understand the importance of using PPE and being responsible for their own safety including, safely operate a hydraulic lift, floor jack and jack stands to work underneath a vehicle.
- Introduction to ISTA, locating Repair Instructions, Tightening Torques, Technical Data, Special Tools, Operating Fluids & Wiring Diagrams.
- Introduction to AIR, locate Repair Instructions, Tightening Torques, Technical Data, Special Tools & Operating Fluids, Installation Locations.
- Access CenterNet and locate SIB's, Training Manuals and Videos.
- Understand the concept of "Best Practices" as it relates to the automotive repair field.
- Access DCSnet to locate vehicle history, status of warranty and maintenance programs, how to review repair history.
- The importance of the QC process (Quality Control).

-
- Develop a process to perform MPI's (Multitpoint Inspections) efficiently and completely in a consistent manner.
 - Correctly complete the inspection form for a PDI-QCI, recording the DOT numbers for each and every tire.
 - Use the Integrated Owner's Manual to locate explanations/videos for how a feature/system operates.
 - Connect an ICOM to perform a short test using the latest BMW diagnostic tools.

ST1802 - Workshop Technology II

Description:

This course is designed to introduce basic hand skills, perform maintenance procedures and CPO inspections. The intended participants for this course are entry-level technicians.

Prerequisites: ST1801 - Workshop Technology I

Target Audience: Entry Level Technicians

Course Length: 4-days

Learning Objectives:

After the completion of this course the participant will be able to:

- Access and navigate in TMSi and understand the content that is available
- Understand the process of Coding and Programming
- Access Dealerspeed
- Performing a vehicle inspections while using Best Practices
- Perform maintenance services
- Proper documentation while filling out an RO
- Identify different fasteners and repair and extract damaged fasteners
- Locate BMW special tools
- Efficiently perform CPO inspections

ST1803 - Electrical Technology I

Description:

This course is designed to instruct participants on performing vehicle electrical system measurements. Here participants will become proficient and become confident when taking voltage supply and voltage drop measurements. The intended participants for this course are entry-level technicians.

Prerequisites: ST1802 - Workshop Technology II

Target Audience: Entry Level Technicians

Course Length: 4-days

Learning Objectives:

After the completion of this course the participant will be able to:

- Properly measure the vehicles voltage supply
- Locate and analyze vehicle wiring diagrams
- Properly utilize the Digital Volt Ohm Meter (DVOM)
- Identify Break Out Boxes and V-Cables and there usage
- Perform Dynamic Electrical Measurement such as a Voltage Drop
- Preform Relay Testing and the purpose of relays and there operation

ST1804 - Chassis Technology I

Description:

This course is designed to instruct participants on basic chassis and brake system fundamentals. Participants will have ample on-car practice performing chassis and brake system services. The intended participants for this course are entry-level technicians.

Prerequisites: ST1803 - Electrical Technology I

Target Audience: Entry Level Technicians

Course Length: 4 -day

Learning Objectives:

After the completion of this course the participant will be able to:

- Introduction to brakes
- Properly perform brake inspections
- Properly complete a brake service
- Inspect tires for wear and defects
- Understand the Tire Pressure Monitor System (TPMS)
- Identify modern suspension systems
- Perform basic wheel alignments
- RDC Tool operation

ST1805 - BMW ASE Associate Test

Description:

Technicians that have completed all of the courses in the Associate Level (ST1801, 1802, 1803 and 1804) will be required to take this test (and pass) prior to being allowed to take ST1806 Associate Hands-on Assessment (ST1806).

Prerequisites: Completed all BMW Associate Level Courses

Target Audience: Entry Level Technicians

Course Length: Online test at Prometric Center
50 questions/75 minutes

Learning Objectives:

After the completion of this test the participant will be able to:

- Assess basic automotive technology knowledge.
- Determine the appropriate starting point for technicians new to BMW.
- Provide a way for experienced technicians to bypass basic automotive classes.
- Provide a recruitment mechanism for all visitors to the ASE website.
- Provide dealership hiring managers with a mechanism to determine the level of knowledge of a prospective new hire as well as the new hire's expected training path.

Note: There are three scenarios in which this assessment will be given:

Scenario #1 - All new technicians to the BMW brand will take this assessment to determine basic automotive knowledge and the appropriate classes to begin their BMW training. Passing this assessment will allow technicians to bypass the Associate Level and immediately begin taking Member Level courses (saving 16 days of Instructor Led Training). For those technicians that do not pass, the test can be retaken or the technician can begin taking Associate Level courses (ST1801, 1802, 1803 and 1804).

Scenario #2 - Technicians that are currently Level 0 may challenge the Associate Level and take the assessment at any time. If they successfully pass they may begin taking Member Level courses. If they do not pass, the technician will continue their training in the Associate Level.

Scenario #3 - Technicians that have completed all of the courses in the Associate Level (ST1801, 1802, 1803 and 1804) will be required to take this test (and pass) prior to being allowed to take ST1806 Associate Hands-on Assessment (ST1806).

ST1806 - Associate Hands-on Assessment

Description:

This hands-on assessment is designed to determine basic automotive technology knowledge and its application to the BMW brand. Successful completion of the BMW ASE Associate Assessment is required to enroll in the Associate Hands-on Assessment. Upon successful completion of this hands-on assessment, technicians will be able to enroll in Member-level courses. This assessment will be conducted at BMW Training Centers.

Prerequisites: ST1805 - BMW ASE Associate Assessment (Passed)

Target Audience: Entry Level Technicians

Course Length: 2-days

Learning Objectives:

After the completion of this hands-on assessment the participant will be able to:

- Assess technician's ability to use BMW Diagnostics (ISTA) to find information and follow instructions
- Demonstrate how to work safely in a workshop environment including Personal Protective Equipment (PPE) and Material Safety Data Sheets (MSDS)
- Ability to perform vehicle inspections
- Locate electrical schematics and perform basic DVOM measurements
- Assess condition and perform basic tasks related to vehicle maintenance

**BLANK
PAGE**

Member Level Courses

ST1807 - Electrical Technology II

Description:

This course is designed to instruct participants on performing and becoming proficient in vehicle electrical system measurements. Participants will also practice isolating an electrical short to ground issue and proper resistance measuring techniques. Airbag safety and handling will also be covered. The intended participants for this course are intermediate-level technicians.

Prerequisites: Associate Level Certification

Target Audience: Associate Level Technicians

Course Length: 4-days

Learning Objectives:

After the completion of this course the participant will be able to:

- Interpret and analyze wiring diagrams
- Demonstrate proper usage of the Digital Volt Ohm Meter (DVOM)
- Perform dynamic electrical measurements
- Isolate electrical short to ground issues
- Perform resistance measurements
- Understand the Input-Process-Output (IPO) of a control unit
- Understand airbag safety and handling of airbags
- Perform a Draw Test using an IMIB

ST1808 - Chassis Technology II

Description:

This course is designed to help technicians understand how BMW brake systems and chassis suspensions are serviced and gain information of how they operate. Participants will have on-car practice performing chassis and brake system services. The intended participants for this course are intermediate-level technicians.

Prerequisites: ST1807 - Electrical Technology II

Target Audience: Associate Level Technicians

Course Length: 4-days

Learning Objectives:

After the completion of this course the participant will be able to:

- Performing grid alignments
- Perform non-basic suspension identification and service
- Identify and service different parking brake variants
- Perform brake maintenance and identify vibration concerns
- Diagnosis brake booster and master cylinder concerns
- Utilize special tools to perform bushing replacement
- Demonstrate strut phasing procedures
- Identify carbon ceramic brakes and there unique features

ST1809 - Drivetrain Technology I

Description:

This course is designed to introduce participants to the mechanical components of an engine as well as provide hands-on experience removing external engine components on vehicles. The course introduces “Best Practices” to demonstrate logical, organized methods that may be applied during engine component disassembly and reassembly. The intended participants for this course are intermediate-level technicians.

Prerequisites: ST1807 - Electrical Technology II

Target Audience: Associate Level Technicians

Course Length: 4-days

Learning Objectives:

After the completion of this course the participant will be able to:

- Identify and become familiar with engine mechanical components
- Properly time an engine
- Utilize Best Practices for logical, organized methods of engine component disassembly and reassembly
- Identify whether or not an engine is consuming oil excessively
- Replace various engine seals
- Test the Low-pressure fuel system
- Properly perform compression and cylinder leakage testing
- Removal and replace fuel injectors on B-designated engines
- Locate engine and transmission oil leaks

ST1810 - BMW ASE Member Test

Description:

This written test will be taken by Associate Level technicians that have completed all courses within the Member Level (ST1807, ST1808, and ST1809). This test is administered the same as a traditional ASE test.

Successful completion of this test will allow a technician to enroll in the Member Level ASE Hands-on Assessment.

Prerequisites: Completed all Member Level Courses

Target Audience: Associate Level Technicians

Course Length: Online test at Prometric Center
50 questions/75 minutes

Learning Objectives:

After the completion of this test the participant will be able to:

- Assess knowledge of BMW specific knowledge of drivetrain, chassis, and electrical systems
- Ability to find/follow information in BMW Diagnostics (ISTA) to perform repairs

Note: There are two scenarios in which this test will be given:

Scenario #1 - An Associate Level technician has completed all courses within the Member Level (ST1807, ST1808, and ST1809). Successfully passing this test will allow a technician to enroll in the Member Hands-on Assessment (ST1811a).

Scenario #2 - A technician with experience in the automotive field (from another brand or independent repair facility) may choose to challenge the Member Level. To challenge this please contact your respective Regional Technical Training Manager for details. Anyone that successfully passes the BMW ASE Member Assessment will still be required to take ST1807 Electrical Technology II and successfully pass the Member Hands-on Assessment (ST1811a) prior to taking any Certified Level course.

ST1811a - Member Hands-on Assessment

Description:

This assessment is for Associate Level technicians that have successfully completed the BMW ASE Member Assessment. This assessment is designed to evaluate BMW specific service/repair techniques. Upon successful completion of this hands-on assessment, technicians will be able to enroll in Certified Level courses. This assessment will be conducted at BMW Training Centers.

Prerequisites: ST1807 - Electrical Technology II
ST1810 - BMW ASE Member Assessment

Target Audience: Associate Level Technicians

Course Length: 2-days

Learning Objectives:

After the completion of this hands-on assessment the participant will be able to:

- Determine retention of information from the Member Level Courses (ST1807, ST1808, ST1809)
- Assess technicians' ability to use BMW Diagnostics (ISTA) to find information and follow instructions
- Ability to perform repair procedures related to BMW specific systems including:
 - Drivetrain systems
 - Chassis systems
 - Electrical systems

ST1811b - Warranty for the Service Technician

Description:

Warranty for Service Technician is designed for new and experienced employees of the brand and provides an in-depth explanation of the BMW warranty process and recent policies that impact successful claim submission. Emphasis is placed on using the warranty portal and recently revised WPPM for problem solving. This course will address effective claim coding using the latest required programs and tools and provides best practice recommendations for the complete warranty process with emphasis on claim preparation and documentation. This class focuses heavily on the Technical warranty topics and is structured for Technicians.

Prerequisites: None

Target Audience: Technicians

Course Length: 1-day

Learning Objectives:

After the completion of this course the participant will be able to:

- Understand the BMW warranty philosophy and policies
- Determine the coverage and program guidelines for claims
- Understand the key components of the warranty administration process using claim examples gathered by BMW NA and BMW Centers
- Use Best Practices to maximize claim payment and efficiency
- Properly document work performed and accurate punch times

Certified Level Courses

ST1812 - Electrical Technology III

Description:

This course is designed to instruct participants in performing and becoming proficient in vehicle Electrical Bus system measurements and diagnosis. Participants will practice isolating various High Speed CAN-Bus, LIN-Bus, and FlexRay electrical issues. The intended participants for this course are advanced-level technicians.

Prerequisites: Completed Member Level Certification

Target Audience: Member Level Technicians

Course Length: 3-days

Learning Objectives:

After the completion of this course the participant will be able to:

- Locate resources to diagnose a CAN-Bus
- Follow a procedure to diagnose a CAN-Bus
- Isolate components using an SSP for Bus Diagnosis
- Properly diagnosis a faulty LIN-Bus
- Properly diagnosis a faulty FlexRay Bus
- Understand the function and operation of the MOST-Bus

ST1813 - Body Systems Technology

Description:

This course is designed to introduce participants to climate control systems and various body systems technologies, such as Advanced Driver Assistance Systems and other emerging technologies. The intended participants for this course are advanced-level technicians.

Prerequisites: Member Level Certification
MC618 - MACS Certification
WB618 - Fundamentals of Air Conditioning

Target Audience: Member Level Technicians

Course Length: 3-days

Learning Objectives:

After the completion of this course the participant will be able to:

- Identify components of the climate control system
- Explain the purpose of the components of the climate control system
- Diagnose and service the climate control system
- Locate resources (FUBs, reference manuals, SIBs, etc.) for various body systems
- Analyze these resources to determine how the system operates
- Diagnose various body systems

ST1814 - Drivetrain Technology II

Description:

This course is designed to introduce participants to the engine management system of BMW engines. Additionally, participants will both check and adjust engine timing on BMW engines. The intended participants for this course are advanced-level technicians.

Prerequisites: Member Level Certification

Target Audience: Member Level Technicians

Course Length: 3-days

Learning Objectives:

After the completion of this course the participant will be able to:

- Identify engine management system components
- Define the purpose of engine management system components
- Use diagnosis requests, component activation and test plans to identify “out-of-spec” values of engine management system components due to poor / lack of maintenance
- Correctly check and adjust camshaft timing on BMW engines

ST1815 - Certified Hands-on Assessment

Description:

This assessment is for Member Level technicians that have successfully completed all courses in the Certified Level (ST1812, 1813, and 1814). This assessment is designed to evaluate the BMW specific diagnostic and repair techniques. Upon successful completion of this hands-on assessment, technicians will be able to enroll in Master Level courses. This assessment will be conducted at BMW Training Centers.

Prerequisites: ST1812 - Electrical Technology III
ST1813 - Body Systems Technology
ST1814 - Drivetrain Technology

Target Audience: Member Level Technicians

Course Length: 2-days

Learning Objectives:

After the completion of this hands-on assessment the participant will be able to:

Assess diagnostic ability of BMW specific systems relating to BMW Body Systems which include:

- Climate Control Systems
- Infotainment Systems

Assess knowledge and competency in diagnosis and repair of BMW Electrical Systems which include:

- Power Management
- Bus Systems

Evaluate ability to perform advanced BMW Drivetrain repair procedures.

Master Level Courses

ST1816 - Master Electrical Diagnosis

Description:

An instructor facilitated course providing advanced electrical system operation and workshop diagnosis. Advanced electrical diagnostics utilizing ISTA and IMIB on current challenging issues. The intended participants for this course are expert-level technicians.

Prerequisites: Certified Level Certification

Target Audience: Certified Level Technicians

Course Length: 3-days

Learning Objectives:

After the completion of this course the participant will be able to:

- Diagnose complex electrical issues
- Diagnose intermittent CAN and LIN-Bus issues

ST1817 - Master Driveline Diagnosis

Description:

This course is designed to assist participants with developing strategies to diagnose engine performance and drivability-related issues. The intended participants for this course are expert-level technicians.

Prerequisites: Certified Level Certification

Target Audience: Certified Level Technicians

Course Length: 3-days

Learning Objectives:

After the completion of this course the participant will be able to:

- Correctly diagnose engine performance and drivability concerns
- Correctly diagnose turbocharging systems
- Use precision engine measurements to diagnose engine performance issues

ST1900 - ASE Master Certification (A1-A8)

Description:

This is a designation for technicians that attain ASE Master Status which includes the current traditional ASE A1-A8 certifications. This is one of the requirements to become a BMW Master Level technician. Each ASE certification is valid for 5 years.

Prerequisites: Completed all Master Level Courses

Target Audience: Master Level Technicians

Course Length: Online test at Prometric Center
A1-A8 ASE Tests

Learning Objectives:

After the completion of all 8 of these certifications the participant will be:

- A Master ASE Certified Technician
- A Master Level Technician if passed the Master Hands-on Assessment

ST1818 - Master Hands-on Assessment

Description:

This assessment is for Certified Level Technicians that have successfully completed all courses in the Master Level (ST1816 and 1817). This assessment is designed to evaluate the technician's BMW specific advanced diagnostic abilities. Upon successful completion of this hands-on assessment, technicians will be able to enroll in Master Diagnostic Specialist Level courses. This assessment will be conducted at BMW Training Centers.

Technicians will return every 3 years to perform this assessment.

Prerequisites: ST1900 - 2019 ASE Master Certification

ST1816 - Master Electrical Diagnosis

ST1817 - Master Driveline Diagnosis

Target Audience: Certified Level Technicians

Course Length: 2-days

Learning Objectives:

After the completion of this hands-on assessment the participant will be able to:

- Assess diagnostic abilities related to BMW specific systems
- Proficiently use all BMW Diagnostic Systems including the IMIB R2

Speciality Courses

Alternative Drive Level

ST1824 - Alternative Drive Part 1

Description:

This course is designed to serve as the introduction to high-voltage BMW vehicles. Complete BMW PHEV and electric drivetrains will be covered.

This course ensures with absolute clarity that the technician is familiar with disconnecting the high-voltage system prior to performing work on these vehicles. It also reinforces the procedure for contacting PuMA before continuing any work on a vehicle that does not display the “Blitz” symbol on the KOMBI when the high-voltage system is disconnected.

Technicians are tested on their understanding of the high-voltage system components and high-voltage safety systems. They are certified on their ability to follow the proper procedure for disconnecting the high-voltage system using the high-voltage disconnect. The intended participants for this course are specialist-level technicians.

Prerequisites: Certified Level Certification

Target Audience: Certified Level Technicians

Course Length: 3-days

Learning Objectives:

After the completion of this course the participant will be able to:

- Understand the hazards of electricity when working with high-voltage drivetrains.
- Perform a proper lock-out procedure for the high-voltage disconnect on a HV vehicle.
- Identify become familiar with high-voltage system components.
- Explain the inherent safety measures built into BMW HV vehicles.
- Perform diagnosis, service and repair on non-energized high-voltage systems on BMW vehicles.
- Understand the proper procedure for contacting PuMA when a vehicle does not display a “Blitz” symbol in the KOMBI and the high voltage status cannot be verified.

ST1825 - Alternative Drive Part 2

Description:

This course is designed to certify technicians on the diagnosis, service and repair of high-voltage batteries in PHEV and electric drive BMW vehicles. BMW PHEV and electric drivetrain batteries will be covered and technicians will receive the High-voltage Battery Service Certification which allows them to perform repairs and service on high-voltage batteries on these vehicles.

This course ensures with absolute clarity that the technician is familiar with the components of high-voltage battery and reinforces the procedure for removing, servicing and returning to service the high-voltage batteries on current BMW iPerformance vehicles.

Technicians are tested on their understanding of the high-voltage battery system components and high-voltage safety systems. They are certified on their ability to follow the proper procedure for disconnecting the high-voltage system and properly performing the necessary services on these batteries while always maintaining the utmost safety. The intended participants for this course are specialist-level technicians.

Prerequisites: ST1824 - BMW Alternative Drive Part 1
or
ST403a - I01 Complete Vehicle

Target Audience: Certified Level Technicians

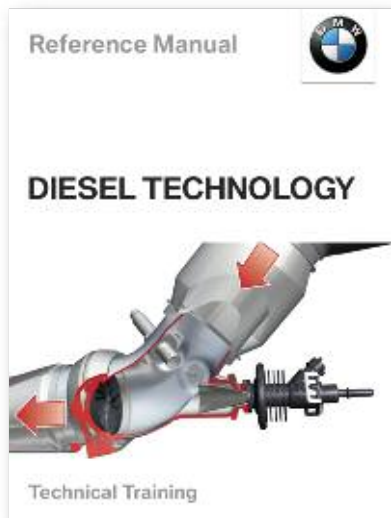

Course Length: 2-days

Learning Objectives:

After the completion of this course the participant will be able to:

- Understand the hazards of electricity when working with high-voltage drivetrains
- Memorize the safety rules when handling the high-voltage battery
- Explain the structure and function of the high-voltage battery unit
- Perform qualified troubleshooting of the high-voltage battery unit
- Perform the removal and installation of the high-voltage battery unit from the vehicle
- Properly prepare the work bay for the battery service procedure
- Perform diagnosis, service and repair on high-voltage battery systems on BMW vehicles
- Properly and safely return the vehicle back to service

Diesel Level

ST1210 - Diesel Technology

Description:

Diesel Technology is an instructor led course designed to prepare technicians to understand and diagnose the diesel technology used in BMW vehicles.

Prerequisites: Member Level Certification

OL1310 - 2nd Generation Diesel Technology

Target Audience: Member Level Technicians

Course Length: 4-days

Learning Objectives:

After the completion of this course the participant will be able to:

- Understand BMW diesel technology
- Identify the U.S. diesel specifications
- Understand the fundamentals of diesel technology
- Identify the engine mechanical systems used in BMW diesel engines
- Identify the components in the engine management system
- Service and diagnosis low/high pressure fuel systems
- Understand and diagnosis the functions of the air management and emission control systems
- Identify the vehicle specific diesel engine changes

Body Technical Level

ST701 - BMW Retractable Hardtop Systems

Description:

BMW Retractable Hardtop Systems is an instructor led course that contains information about the E93 and F33 retractable hardtop, components, operation, service and diagnosis, as well as information on the new and enhanced systems and features on the F33.

Prerequisites: Member Level Certification

Target Audience: Member Level Technicians

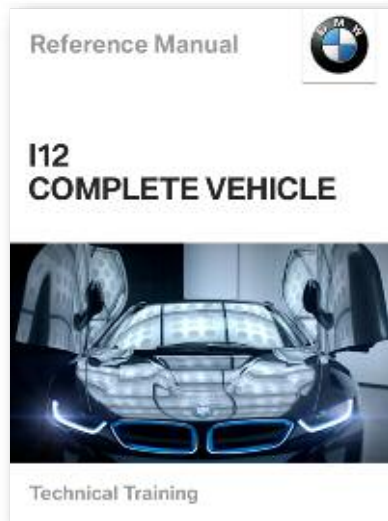

Course Length: 2-days

Learning Objectives:

After the completion of this course the participant will be able to:

- Understand the theory of the retractable hardtop
- Diagnose and service systems on the F33 retractable hardtop
- Understand the operation of the RHT
- Locate and identify the structure and components of the RHT
- Diagnose and service the F33 retractable hardtop
- Properly identify the bus networks, modules and passive safety features

Elective Courses

ST1408 - I12 Complete Vehicle

Description:

The I12 Complete vehicle is an hands on instructor led course designated to give technicians training and diagnosis on the New BMW i8.

Prerequisites: Certified Level Certification
Alternative Drive Level Certification

ST1824 - Alternative Drive Part I
ST1825 - Alternative Drive Part II

Target Audience: Certified Level Technicians

Course Length: 2-days

Learning Objectives:

After the completion of this course the participant will be able to:

- Become familiar with the special features of the design and function of the B38 Top Engine and Electrical Machine.
- Perform a coolant bleed procedure using special tools
- Identify the suspension design of the front and rear suspensions used in the I12
- Understand the function of the Dynamic Dampers
- Recognize the key elements of the General Vehicle Electrical system
- The participant is able to describe the heating and air-conditioning system and its special features
- The participant can carry out service repair work on the heating and air-conditioning system professionally
- Explain the structure and function of the high-voltage battery unit
- Perform qualified troubleshooting of the high-voltage battery unit
- Perform the removal and installation of the high-voltage battery unit from the vehicle
- Properly prepare the work bay for the battery service procedure
- Perform diagnosis, service and repair on high-voltage battery systems on BMW vehicles
- Properly and safely return the vehicle back to service

ST1821 - High-voltage Diagnosis Specialist

Description:

This class is designed to serve as the “No Blitz symbol” or “No high voltage present” validation certification. This course ensures that the technician must have PuMA authorization before any work is performed on a vehicle that does not display the “Blitz” symbol when the high-voltage system is disconnected. Technicians are certified on their understanding of the high-voltage system and high-voltage safety systems. The intended participants for this course are specialist-level technicians.

Prerequisites: Master Level Certification
Alternative Drive Level Certification

ST1824 - BMW Alternative Drive Part I
ST1825 - BMW Alternative Drive Part II

Target Audience: Master Level Technicians

Course Length: 3-days

Learning Objectives:

After the completion of this course the participant will be able to:

- Understand the hazards of electricity when working with high voltage
- Utilize Personal Protection Equipment (PPE) used to work with HV vehicle systems
- Perform a proper risk assessment with unknown HV vehicle system status
- Properly use the high-voltage system diagnostic equipment
- Explain the high-voltage system safety measures in BMW vehicles
- Perform the high-voltage tests required to diagnose, service and repair HV systems on BMW vehicles
- Perform the “No High Voltage Present” Validation Certification following the proper procedure

ST1848 - ASE Test Prep

Description:

The ST1848 ASE Test Prep Course will discuss topics regarding ASE (Automotive Service Excellence) automobile tests from A1 through A8.

- Engine Repair (A1)
- Automatic Transmission/Transaxle (A2)
- Manual Drivetrain and Axles (A3)
- Suspension and Steering (A4)
- Brakes (A5)
- Electrical/Electronic Systems (A6)
- Heating and Air Conditioning (A7)
- Engine Performance (A8)

Prerequisites: None

Target Audience: Technicians/Shop Foreman

Course Length: 1-day

Learning Objectives:

After the completion of this course the participant will be able to:

- Identify the need for ASE test certifications
- Evaluate the question styles used in ASE tests
- Demonstrate the computer-based interface used during testing at Prometric centers
- Analyze and interpret ASE A1 through A8 sample test questions
- Validate A1 through A8 ASE sample test questions using workshop vehicles and equipment

ST1903 - 2019 Model Year Update

Description:

The 2019 Model Year Update Instructor Led Training course introduces the new models for 2019.

Prerequisites: Certified Level Certification

Target Audience: Certified Level Technicians

Course Length: 3-days

Learning Objectives:

After the completion of this course the participant will be able to:

- Identify the changes and new features of the interior and exterior of the new models for 2019
- Perform electrical diagnosis on the dual battery system
- Explain the term Service Pack 2018
- Identify changes with Kombi, Displays and Controls (ID7)
- Explain the new DSCi system and the functionality, changes, and service procedures
- Identify changes to chassis/suspension on the new models and there unique features
- Identify changes to the Comfort Access 2.0 system as well as to perform diagnosis
- Demonstrate the various settings to activate features like Remote Start and Comfort Access 2.0
- Identify the new Driver Assistant Systems and demonstrate the features
- Assign different personnel profiles and explain the new features
- Become familiar with the different engines that are available and there new features

Required Web Based Training

OL17-5021 - Intro to BMW Identification Systems and Driving Technology

Description:

Are you challenged understanding the various BMW Group identification and numbering systems, or how various BMW driving technology features work? If so, this is the course for you.

This course has two main sections, Identification Systems and Features & Technology.

The Identification Systems section uncovers most of BMW's mysterious codes, abbreviations and acronyms that we be referenced during your career with BMW.

Features & Technology explains how BMW defined the performance luxury vehicle market segment and continues to set the benchmark for automotive technology in our quest to remain "The Ultimate Driving Machine." Design features such as EfficientDynamics, ConnectedDrive and the various Driver Assistance Systems features are also presented. From there, the course moves on to present many of BMW's groundbreaking technologies in drivetrain, chassis and suspension, and body electronics.

Prerequisites: None

Units: 1

Course length: 1 hour, 30 minutes

VO366 - Service Process: Workshop Administration and Repair Protocol

Description:

Welcome to the "Service Process – Workshop Administration and Repair Protocol" training class, course code VO366. This course is part of a series based on service department job code.

Prerequisites: None

Units: 1

Course length: 1 hour, 24 minutes

VO368 - Service Process: Reduction and Management of Repeat Repairs

Description:

Welcome to the “Service Process – Reduction and Management of Repeat Repairs” training class. This course is part of a series based on service department job code. In this module we will delve into the service process management to ensure repeat repair occurrences in your center are few. Our goal is quite simple, to raise Customer Satisfaction. Customer dis-satisfaction is immediate if they’re required to bring their vehicle back to your center for the same issue more than once.

Prerequisites: None
Units: 1
Course length: 1 hour

VO369 - Service Process Overview

Description:

Welcome to the Service Process introduction training module for BMW Group Service Department employees. This short introduction module is the first in a series that have been established to support your specific service department job role based on your BMW Center job code.

The Service Process is a step by step, best practice approach to operations, when consistently practiced on a daily basis they ensure you and your center team is providing premium experiences for your customers.

Prerequisites: None
Units: 1
Course length: 1 hour, 24 minutes

WB618 - Fundamentals of Air Conditioning

Description:

WB618 is a prerequisite to attend the BMW Technical Certified Level instructor led courses. Learning Objectives: Introduction Heat Exchange Refrigerant The AC System Diagnosis Air Distribution Recover, Recycle, Recharge Final Exam.

Prerequisites: None
Units: 1
Course length: 2 hours

Web Based Training

OL1831a - G05 Body

Description:

This web course describes the body design and interior in the new BMW X5 (G05). This WBT complements the information found in the ST1831 G05 Complete Vehicle training material.

Prerequisites: None

Units: 1

Course length: 10 minutes

OL1831b - G05 Drivetrain, Chassis & Suspension

Description:

This web course describes the changes to the drivetrain, chassis and suspension used the new BMW X5 (G05). This WBT complements the information found in the ST1831 G05 Complete Vehicle training material.

Prerequisites: None

Units: 1

Course length: 20 minutes

OL1831c - G05 General Vehicle Electronics

Description:

This web course describes the electrical systems in the new BMW X5 (G05). This WBT complements the information found in the ST1831 G05 Complete Vehicle training material.

Prerequisites: None

Units: 1

Course length: 15 minutes

OL1831d - G05 Driver Assistance Systems

Description:

This web course describes the driver assistance systems in the new BMW X5 (G05). This WBT complements the information found in the ST1831 G05 Complete Vehicle training material.

Prerequisites:	None
Units:	1
Course length:	10 minutes

OL1831e - G05 Displays & Controls

Description:

This web course describes the display elements in the new BMW X5 (G05). This WBT complements the information found in the ST1831 G05 Complete Vehicle training material.

Prerequisites:	None
Units:	1
Course length:	10 minutes

OL1831f - G05 Infotainment

Description:

This web course describes the infotainment systems in the new BMW X5 (G05). This WBT complements the information found in the ST1831 G05 Complete Vehicle training material.

Prerequisites:	None
Units:	1
Course length:	20 minutes

OL1833a - G15 Body

Description:

This web course describes the body design and interior in the new BMW 8 series (G15). This WBT complements the information found in the ST1833 G15 Complete Vehicle training material.

Prerequisites: None

Units: 1

Course length: 10 minutes

OL1833b - G15 Drivetrain, Chassis & Suspension

Description:

This web course describes the changes to the drivetrain, chassis and suspension used the new BMW 8 series (G15). This WBT complements the information found in the ST1833 G15 Complete Vehicle training material.

Prerequisites: None

Units: 1

Course length: 20 minutes

OL1833c - G15 General Vehicle Electronics

Description:

This web course describes the electrical systems in the new BMW 8 series (G15). This WBT complements the information found in the ST1833 G15 Complete Vehicle training material.

Prerequisites: None

Units: 1

Course length: 15 minutes

OL1833d - G15 Driver Assistance Systems

Description:

This web course describes the driver assistance systems in the new BMW 8 series (G15). This WBT complements the information found in the ST1833 G15 Complete Vehicle training material.

Prerequisites: None
Units: 1
Course length: 20 minutes

OL1833e - G15 Displays & Controls

Description:

This web course describes the display elements in the new BMW 8 series (G15). This WBT complements the information found in the ST1833 G15 Complete Vehicle training material.

Prerequisites: None
Units: 1
Course length: 10 minutes

OL1833f - G15 Infotainment

Description:

This web course describes the infotainment systems in the new BMW 8 series (G15). This WBT complements the information found in the ST1833 G15 Complete Vehicle training material.

Prerequisites: None
Units: 1
Course length: 20 minutes

OL1853 - B58TU Engine

Description:

This web course describes the changes and modifications to the 2nd generation B58 engine. This WBT complements the information found in the ST1853 B58TU Engine training material.

Prerequisites: None
Units: 1
Course length: 15 minutes

OL1854 - N63TU3 Engine

Description:

This web course describes the changes and modifications to the 4th generation N63 engine. This WBT complements the information found in the ST1854 N63TU3 Engine training material.

Prerequisites: None
Units: 1
Course length: 15 minutes

OL1855 - Displays & Controls 2018

Description:

This web course describes the display and control elements in vehicles with SP 2018. This WBT complements the information found in the ST1855 Displays & Controls 2018 training material.

Prerequisites: None
Units: 1
Course length: 10 minutes

OL1856 - General Vehicle Electrics 2018

Description:

This web course describes the vehicle electronics in vehicles with SP 2018. This WBT complements the information found in the ST1856 General Vehicle Electronics 2018 training material.

Prerequisites: None
Units: 1
Course length: 15 minutes

OL1857 - Infotainment 2018

Description:

This web course describes the infotainment systems with SP 2018. This WBT complements the information found in the ST1857 Infotainment 2018 training material.

Prerequisites: None
Units: 1
Course length: 20 minutes

OL1858 - Driver Assistance Systems 2018

Description:

This web course describes the driver assist systems with SP 2018. This WBT complements the information found in the ST1858 Driver Assistance Systems 2018 training material.

Prerequisites: None
Units: 1
Course length: 35 minutes

OL1408a - I12 Introduction

Description:

This web course is the introduction of the new BMW i8 (I12). It is an overview of the BMW i8 systems, functions and components. This WBT complements the information found in the ST1408 I12 Complete Vehicle (BMW i8 Introduction) training material.

Prerequisites: None
Units: 1
Course length: 30 minutes

OL1408b - I12 General Vehicle Electronics

Description:

This web course describes the General Vehicle Electronics systems and components of the new BMW i8 (I12). This WBT complements the information found in the ST1408 (I12) Complete Vehicle (BMW i8 General Vehicle Electronics) training material.

Prerequisites: None
Units: 1
Course length: 30 minutes

OL1408c - I12 High-voltage Components

Description:

This web course describes the High Voltage Components systems and components of the new BMW i8 (I12). This WBT complements the information found in the ST1408 I12 Complete Vehicle (BMW i8 High Voltage Components) training material.

Prerequisites: None
Units: 1
Course length: 30 minutes

OL1408d - I12 High-voltage Battery Unit

Description:

This web course describes the High Voltage Battery Unit and components of the new BMW i8 (I12). This WBT complements the information found in the ST1408 (i12) Complete Vehicle (BMW i8 High Voltage Battery Unit) training material.

Prerequisites:	None
Units:	1
Course length:	30 minutes

OL1408e - I12 Heating and Air Conditioning

Description:

This web course describes the Heating and Air Conditioning Systems and components of the new BMW i8 (I12). This WBT complements the information found in the ST1408 i12 Complete Vehicle (BMW i8 Heating and Air Conditioning Systems) training material.

Prerequisites:	None
Units:	1
Course length:	30 minutes

OL1408f - I12 Drive

Description:

This web course describes the Powertrain of the new BMW i8 (i12). This WBT complements the information found in the ST1408 I12 Complete Vehicle (Powertrain) training material.

Prerequisites:	None
Units:	1
Course length:	30 minutes

OL1408g - I12 Chassis and Suspension

Description:

This web course describes the Chassis and Suspension components of the new BMW i8 (I12). It is an overview of the Chassis and Suspension systems and components found on the BMW i8. This WBT complements the information found in the ST1408 I12 Complete Vehicle (BMW i8 Chassis and Suspension) training material.

Prerequisites: None

Units: 1

Course length: 30 minutes

OL1408h - I12 Body Repair Level 1

Description:

This web course describes the Body Repair Level 1 procedures for the new BMW i8 (I12). It is an overview of the replacement of parts of the body outer panels and their reconditioning. This WBT complements the information found in the ST1408 I12 Complete Vehicle training material.

Prerequisites: None

Units: 1

Course length: 30 minutes

OL1501a - G12 Body Introduction

Description:

This web course introduces the body design of the new BMW 7 Series (G12). It discusses the materials used in its construction of the “Carbon Core” as well as interior features and functions.

Prerequisites: None

Units: 1

Course length: 30 minutes

OL1501b - G12 Chassis and Suspension

Description:

This web course describes the chassis design of the new BMW 7 Series (G12). It discusses the different suspension options available like Air Suspension, electronic shocks (EDC), Dynamic Stability control (DSC) and tire pressure monitoring system (TPMS) as well as the specific features and functions of the steering and suspension components (like variable sport rack and pinion EPS).

Prerequisites: None
Units: 1
Course length: 40 minutes

OL1501c - G12 Powertrain

Description:

This web course describes the engines and transmissions installed in the new BMW 7 Series (G12). It discusses the different powertrain options available as well as the specific features of the B58 six cylinder and the N63TU2 8 eight cylinder engines and transmission components and their driving functions.

Prerequisites: None
Units: 1
Course length: 20 minutes

OL1501d - G12 Voltage Supply and BUS System

Description:

This web course describes the voltage supply and the individual BUS communication systems installed in the new BMW 7 Series (G12). It discusses the different power supply variants depending on the options installed. It also explains the new terminal control (Parking, Residing and Driving) strategy used on the G12 for the first time.

Prerequisites: None
Units: 1
Course length: 35 minutes

OL1501e - G12 General Vehicle Electronics

Description:

This web course describes the special lighting features and the seat functions installed in the new BMW 7 Series (G12). It discusses the different headlight variants depending on the options installed. It also explains the new executive rear seat lounging and its comfort features used on the G12 for the first time.

Prerequisites: None

Units: 1

Course length: 25 minutes

OL1501f - G12 Driver Assistance Systems

Description:

This web course describes the advanced driving assistance systems installed in the new BMW 7 Series (G12). It discusses the different Collision detection and avoidance features as well as the new lane keeping assistant function. It also explains the new functions of surround view, the KAFAS camera and the new Auto PDC features used on the G12.

Prerequisites: None

Units: 1

Course length: 30 minutes

OL1501g - G12 Displays and Controls

Description:

This web course describes the individual displays and special control features in the new BMW 7 Series (G12). It discusses the different functions depending on the options installed. It explains the new driver experience switch functions and the touch and gesture controls as well as the new optional touch control tablet for the rear seat entertainment.

Prerequisites: None

Units: 1

Course length: 40 minutes

OL1501h - G12 Information and Communication

Description:

This web course describes the telephone, entertainment and navigation features installed in the new BMW 7 Series (G12). It introduces the new Head Unit High 2 and discusses the different telephone, navigation and WiFi functions installed as well as wireless charging system. It also explains the new rear seat entertainment functions including the new optional touch command tablet.

Prerequisites: None

Units: 1

Course length: 30 minutes

OL1501i - G12 Climate Control

Description:

This web course describes the climate control features in the new BMW 7 Series (G12). It discusses the new design changes of the AC system, the new ozone generator system as well as the new fragrance dispenser.

Prerequisites: None

Units: 1

Course length: 20 minutes

OL1602 - F87 Complete Vehicle

Description:

This web course introduces the body design of the new BMW 5 Series (G30). It discusses the materials used as well as interior features and functions.

Prerequisites: None

Units: 1

Course length: 30 minutes

OL1604a - G30 Complete Vehicle (Body)

Description:

This web course introduces the body design of the new BMW 5 Series (G30). It discusses the materials. used as well as interior features and functions.

Prerequisites: None

Units: 1

Course length: 25 minutes

OL1604b - G30 Complete Vehicle (Powertrain/Chassis)

Description:

This web course describes the chassis design along with the engines and transmissions installed in the new BMW 5 Series (G30). It discusses the different chassis and suspension options available as well as the specific features..

It discusses all the new features of the vehicle electrical system and how it interacts with the driver.

Prerequisites: None

Units: 1

Course length: 25 minutes

OL1604c - G30 Complete Vehicle (General Vehicle Electronics)

Description:

This web course describes the vehicle electrical system along with installed control units, an overview of the bus system and voltage supply, as well as headlights and HVAC in the new BMW 5 Series.

Prerequisites: None

Units: 1

Course length: 25 minutes

OL1604d - G30 Complete Vehicle (Driver Assistance)

Description:

This web course describes the advanced driving assistance systems installed in the new BMW 5 Series (G30). It discusses the additional functions of the Collision detection (compared to G12) as well as introduces new features such as Intersection warning, Evasion assistance / Evasion Aid and Remote 3D view.

Prerequisites: None

Units: 1

Course length: 20 minutes

OL1604e - G30 Complete Vehicle (Infotainment)

Description:

This web course describes the telephone, entertainment and navigation features installed in the new BMW 5 Series (G30). It introduces the new telephone, navigation and WiFi functions as well as the new version of wireless charging system.

Prerequisites: None

Units: 1

Course length: 25 minutes

OL1604f - G30 Complete Vehicle (Displays & Controls)

Description:

This web course describes the individual displays and special control features in the new BMW 5 Series (G30). It discusses the different functions depending on the options installed.

Prerequisites: None

Units: 1

Course length: 20 minutes

OL1607a - G12 PHEV High-voltage Components

Description:

This web course describes the High Voltage Components systems and components of the new BMW G12 PHEV. This WBT complements the information found in the ST1607 training material.

Prerequisites:	None
Units:	1
Course length:	50 minutes

OL1607b - G12 PHEV High-voltage Battery Unit

Description:

This web course describes the High Voltage Battery Unit and components of the new BMW G12 PHEV. This WBT complements the information found in the ST1607 training material.

Prerequisites:	None
Units:	1
Course length:	30 minutes

OL1700a - G30 PHEV High-voltage Components

Description:

This web course describes the High Voltage Components systems and components of the new BMW G30 PHEV. This WBT complements the information found in the ST1700 training material.

Prerequisites:	None
Units:	1
Course length:	45 minutes

OL1700b - G30 PHEV High-voltage Battery Unit

Description:

This web course describes the High Voltage Battery Unit and components of the new BMW G30 PHEV. This WBT complements the information found in the ST1700 training material.

Prerequisites: None

Units: 1

Course length: 45 minutes

OL1403a - I01 Product Introduction

Description:

This web course is the introduction of the new BMW i3 (I01). It is an overview of the BMW i3 systems, functions and components. This WBT complements the information found in the ST1403 I01 Complete Vehicle (BMW i3 Introduction) training material.

Prerequisites: None

Units: 1

Course length: 30 minutes

OL1403b - I01 Body Level 1

Description:

This web course describes the Body Repair Level 1 procedures for the new BMW i3 (I01). It is an overview of the replacement of parts of the body outer panels and their reconditioning, the replacement of fixing rails and the replacement of bolted on body components. This WBT complements the information found in the ST1403 I01 Complete Vehicle (BMW i3 Body Repair Level 1) training material.

Prerequisites: None

Units: 1

Course length: 45 minutes

OL1403c - I01 Chassis & Suspension

Description:

This web course describes the Chassis and Suspension components of the new BMW i3 (I01). It is an overview of the Chassis and Suspension systems and components found on the BMW i3. This WBT complements the information found in the ST1403 I01 Complete Vehicle (BMW i3 Chassis and Suspension) training material.

Prerequisites: None

Units: 1

Course length: 30 minutes

OL1403d - I01 General Vehicle Electronics

Description:

This web course describes the General Vehicle Electronics systems and components of the new BMW i3 (I01). This WBT complements the information found in the ST1403 I01 Complete Vehicle (BMW i3 General Vehicle Electronics) training material.

Prerequisites: None

Units: 1

Course length: 30 minutes

OL1403e - I01 High-voltage Components

Description:

This web course describes the High Voltage Components systems and components of the new BMW i3 (I01). This WBT complements the information found in the ST1403 I01 Complete Vehicle (BMW i3 High Voltage Components) training material.

Prerequisites: None

Units: 1

Course length: 30 minutes

OL1403f - I01 High-voltage Battery Unit

Description:

This web course describes the High Voltage Battery Unit and components of the new BMW i3 (I01). This WBT complements the information found in the ST1403 I01 Complete Vehicle (BMW i3 High Voltage Battery Unit) training material.

Prerequisites: None

Units: 1

Course length: 30 minutes

OL1403g - I01 Heating and Air Conditioning Systems

Description:

This web course describes the Heating and Air Conditioning Systems and components of the new BMW i3 (I01). This WBT complements the information found in the ST1403 I01 Complete Vehicle (BMW i3 Heating and Air Conditioning Systems) training material.

Prerequisites: None

Units: 1

Course length: 30 minutes

OL1403h - I01 Information and Communication

Description:

This web course describes the Information and Communication Systems and components of the new BMW i3 (I01). This WBT complements the information found in the ST1403 I01 Complete Vehicle (BMW i3 Information and Communication) training material.

Prerequisites: None

Units: 1

Course length: 30 minutes

OL1403i - I01 W20 Engine

Description:

This web course describes the W20 Engine of the new BMW i3 (I01 REX). This WBT complements the information found in the ST1403 I01 Complete Vehicle (BMW i3 W20 Engine) training material.

Prerequisites: None

Units: 1

Course length: 30 minutes

OL1507a - F15 PHEV Complete Vehicle

Description:

This web course covers the internal structure and the operation and special functions of the high-voltage components. This WBT complements the information found in the ST1507 F15 PHEV training material.

Prerequisites: None

Units: 1

Course length: 30 minutes

OL1507b - F15 PHEV Battery Unit

Description:

This web course covers the internal structure, the operation and special functions of the voltage storage device as well as the service repair procedures and storage. This WBT complements the information found in the ST1507 F15 PHEV training material.

Prerequisites: None

Units: 1

Course length: 30 minutes

OL1600a - F30 PHEV High-voltage Components

Description:

This web course describes the High Voltage Components systems and components of the new BMW F30 PHEV. This WBT complements the information found in the ST1600 training material.

Prerequisites: None
Units: 1
Course length: 30 minutes

OL1600b - F30 PHEV High-voltage Battery Unit

Description:

This web course describes the High Voltage Battery Unit and components of the new BMW F30 PHEV. This WBT complements the information found in the ST1600 training material.

Prerequisites: None
Units: 1
Course length: 30 minutes

OL1700a - G30 PHEV High-voltage Components

Description:

This web course describes the High Voltage Components systems and components of the new BMW G30 PHEV. This WBT complements the information found in the ST1700 training material.

Prerequisites: None
Units: 1
Course length: 45 minutes

OL1700b - G30 PHEV High-voltage Battery Unit

Description:

This web course describes the High Voltage Battery Unit and components of the new BMW G30 PHEV. This WBT complements the information found in the ST1700 training material.

Prerequisites: None
Units: 1
Course length: 45 minutes

VO153 - BMW History and Heritage

Description:

This course introduces participants to the rich history and heritage of BMW. This Video On Demand focuses on BMW's history of accomplishment and excellence. You'll discover exactly what makes BMW one of the most powerful brands in the world.

Prerequisites: None
Units: 1
Course length: 15 minutes

VO810 - BMW Advanced Diesel Technology

Description:

This web course describes and covers the changes in diesel technology used in BMW vehicles.

Prerequisites: WB603 - Introduction to Diesel Technology
Units: 1
Course length: 1 hour

VO900 - Understanding Energy Diagnosis

Description:

An in-depth look at how to perform the Energy Diagnosis test plan and how to interpret the results.

Prerequisites: None

Units: 1

Course length: 1 hour

VO720 - Identifying E93 Convertible Water Leaks

Description:

VO720 video on demand demonstrates the correct process to identify and resolve convertible water leaks and identifies the resolution process.

Prerequisites: None

Units: 1

Course length: 1 hour

WB057 - Electronic Transmission Fundamentals

Description:

Identify the types of transmissions used in BMW vehicles. Describe the difference between the Automatic and the Manual transmission. Explain the operation of the Automatic Transmission. Identify the components and function of the torque converter. Identify the components and function of the Clutches, Bands and Solenoids. Describe planetary gear set types and their operation. Describe power flow through the gear set. Explain the hydraulic flow through the transmission. Describe the electronic controls of the BMW automatic transmission. Describe the different adaptation and emergency programs used on BMW automatic transmissions. You **MUST** complete the presentation and take the online post-test available at the conclusion of the course.

Prerequisites: None

Units: 2

Course length: 2 hours

WB401 - Basic Bus Systems Online Course

Description:

Introduction to BMW Bus Systems Buses covered include I/K/P/CAN/M Bus Systems This is a web-based course (online). Following presentation of the learning material you must take the test presented at the end of this course.

Prerequisites: None

Units: 2

Course length: 2 hours

WB402 - Advanced Bus Systems Online Course

Description:

Advanced Coverage of BMW Bus Systems Buses covered include K-CAN, PT-CAN, MOST and byteflight Bus Systems This is a web-based course (online). Following presentation of the learning material you must take the test presented at the end of this course.

Prerequisites: None

Units: 1

Course length: 2 hours

WB603 - Introduction to Diesel Technology

Description:

The Introduction to Diesel Technology course is offered only as an on-line course. This course covers the following topics. Diesel Theory, Air Induction System, Fuel Systems Fuel Injection Technology, Diesel Emissions and Emission Controls, Diesel Lubrication Systems and Diesel Starting Aids.

Prerequisites: None

Units: 1.5

Course length: 1.5 hours

WB920a - Principles of Hybrid Technology

Description:

This web based training course offers information on the Basic Principles of Hybrid Technology. The course is approximately 45 minutes in duration. This WBT is just one element that must be completed in order to receive full credit for the ST920 course.

Prerequisites: None

Units: 1

Course length: 1 hour

Other Recommended Training Offerings

Other recommended training offerings can be found within the TMSi website.

Required Technical training criteria are subject to change and will be updated on an as-needed basis to support changes in BMW products as well as the national and global market.
